Index to Vol. 27 (1985) of R&D

Bold type refers to issue numbers in Vol. 27 of *Research & Development*. Light numerals indicate page numbers.

Abortion **2**, 27.
Absorbed radiation **4**, 121.
Absorption air conditioning **1**, 52.
Academic community **7**, 42.
Academic freedom **9**, 64.
Academic research **4**, 46; **9**, 11; **12**, 29.
Accelerated beam **11**, 66.
Accelerating gap **2**, 139.
Accelerating gradients **2**, 105.
Accelerating tax deductions **4**, 31.
Acceleration of time **2**, 170.
Accelerometer **4**, 37.
Accounting practices **5**, 29.
Acid rain **1**, 40; **2**, 98; **4**, 17, 50; **5**, 51; **6**, 43.
Acoustic microscopy **5**, 132; **11**, 62.
Acoustic sensor **5**, 68.
Acquisition campaign **11**, 45.
Activists **11**, 76.
Addressing conditions **4**, 85.
Adequacy of coverage **10**, 29.
Adhesion **2**, 110, 144; **6**, 114; **8**, 81.
Adjacent-bit demagnetization processes **5**, 121.
Advanced degrees **3**, 70; **5**, 103.
Advanced Limiter Test-II **7**, 46.
Advanced passenger train **12**, 29.
Advertising claims **2**, 190.
AIDS **11**, 76.
Air bubbles **11**, 70.
Air burst **12**, 32.
Air cargo "sternwheeler" **1**, 33.
Air-conditioning system **1**, 52.
Air-cushion vehicles **5**, 75.
Aircraft drag **6**, 47.
Aircraft parts **2**, 55.
Aircraft deicing system **2**, 82.
Aircraft fuel performance **3**, 33.
Aircraft sensor inputs **10**, 43.
Air filtration **4**, 109.
Airflow control **2**, 77, 191; **3**, 33.
Air heating applications **5**, 84.
Air/skin friction **3**, 33.
Air-traffic-control radars **2**, 80; **3**, 44.
Allied Corp. **10**, 96.
Alternate energy source **2**, 96; **4**, 48.
Alternating gradient synchroton accelerator **11**, 66.
Aluminum-manganese alloy **4**, 71.
Aluminum-silicon alloys **3**, 173.
American Gas Assn **5**, 90.
American Institute of Chemists **2**, 64.
American Physical Society **4**, 45.
American Society for Testing & Materials **2**, 63, 198; **3**, 86; **6**, 100; **9**, 46.
American Vacuum Society **4**, 133; **11**, 95.
Ames Laboratory **10**, 71.
Amino acids **11**, 17, 76.
Amorphous metals and alloys **2**, 108; **9**, 132.
Amperometric detector **10**, 71.
Amphipathic structure **3**, 92.
Amphoteric surfactants **3**, 93.
Analog-to-digital converters **1**, 102
Analysis of radioactive materials **7**, 36.
Analysis time **9**, 106, 120.
Angle-resolved ESCA **2**, 144; **9**, 127.
Angular resolution **2**, 3, 144.
Anion exchange chromatography **6**, 84; **9**, 92.
Annual forecast **1**, 68.
Annual salary survey **3**, 67.
Antarctic enzyme **11**, 72.
Anthrax **9**, 68.
Antibiotic production **11**, 72.
Antibodies **6**, 3, 82; **11**, 76.
Anticancer program **11**, 76.
Antigen surface **6**, 82.
Antimatter **3**, 76.
Anti-nuclear group **12**, 33.
Antioxidant efficiency **4**, 64.
Antioxidant packages **6**, 101.
Antiprotons **3**, 76.
Antireflective material **7**, 74.
Anti-satellite warfare **9**, 60.
Antitrust violation **1**, 29.
Apollo-Soyuz linkup **9**, 55.
Applied science **2**, 126; **3**, 67; **4**, 45; **8**, 48; **11**, 76.
Apportionment approach **8**, 29.
Aquifers **5**, 51.
Arctic engineering **12**, 32.
Area radiation-monitoring system **5**, 39.
Argon laser **1**, 56.
Argonne National Laboratory **10**, 84, 87, 100.
Ariane rocket **3**, 47; **6**, 74.
Arkansas, Univ. of **10**, 64.
Arms control **11**, 45.
Army Corps of Engineers **10**, 75.
Artificial intelligence **3**, 41; **4**, 45, 46; **5**, 64; **8**, 56; A.I. cont.; **10**, 46, 48; **12**, 27, 29.
Artificial sapphire **2**, 107.
Ascitic tumors **6**, 83.
Ash-fusion temperatures **9**, 78.
Aspect ratio **1**, 110; **7**, 61.
Assay instrument **1**, 39.
Asset management advice **6**, 29.
Astrometric measurements **11**, 35.
Astronomical mystery **4**, 17.
Astronomical studies **8**, 60.
Asynchronous device driver **12**, 52.
AT&T Bell Laboratories **10**, 76, 79, 91, 92, 95, 99.
Atlantic Richfield **10**, 87.
Atlantis shuttle **3**, 46.
Atmospheric combustion exhaust simulator **2**, 84.
Atmospheric deposition **6**, 39.
Atmospheric fluidized-bed combustion **9**, 73.
Atomic absorption spectrophotometer **2**, 150.
Atomic clock **5**, 44.
Atomic Energy of Canada Ltd. **10**, 87.
Atomic footprints **5**, 44.
Atomic oxygen **6**, 44.
Atomic vapor laser isotope separation **9**, 54.
Atomizer design **2**, 150.
Aurora borealis **6**, 76; **9**, 45.
Australian grants scheme **10**, 64; **11**, 59.
Australian telescope **2**, 90.
Auto emissions **4**, 50.
Automobile ignition **5**, 80.
Autopilot designs **2**, 114.
Autoradiography **12**, 31.
Availability of labor **4**, 71.
Availability of resources **5**, 29.
Axial magnetic field **7**, 48.
Axis of rotation **9**, 128.

—B—

Background capacitance canceling **11**, 35.
Background correction **2**, 150.
Background equivalent concentration **4**, 114.
Background operation **12**, 52.
Background radiation **2**, 171; **4**, 17.
Backstreaming **7**, 74.
Baekeland, Leo Hendrick, Award **7**, 35.
Balance of trade **12**, 31.
Baldrige, Malcolm **4**, 54; **5**, 56; **8**, 50, 54.
Ballistic transistors **5**, 58.
Banking deregulation **8**, 48.
Barrel-vaulted corridors **5**, 3, 91.
Barrier properties **7**, 61.
Baseband processor **10**, 95.
Basic particles **2**, 137.
Basic research **3**, 41, 80; **4**, 45; **6**, 58; **9**, 100; **10**, 3, 111; **11**, 50, 76; **12**, 31.
Battery concepts **7**, 78.
Battery Energy Storage Test **9**, 78.
Battery systems **1**, 54; **5**, 73.
Beach surveying system **8**, 64.
Beamline installation **3**, 43.
Beat frequency accelerator **2**, 105.
Bellows piping **8**, 39.
Belt tension **3**, 104.
Benchmark figure **4**, 84.
Benefit package **6**, 29.
Beryllium concentration **9**, 122.
Beryllium-copper alloys **10**, 96; **11**, 166.
Bhopal, India **12**, 36.
Biaxial high-temperature fatigue extensometer **10**, 99.
Bidirectional actuator **5**, 86.
Big bang theory **2**, 170; **4**, 190; **7**, 53; **11**, 64.
Bioengineered organisms **9**, 53.
Biodegradation **1**, 33; **7**, 41.
Bioengineering **10**, 111.
Biological cell structures **10**, 42.
Biological membranes **4**, 66; **5**, 64.
Biological pressure **4**, 17; **11**, 17.
Biological research **6**, 82; **11**, 76.
Biological warfare **9**, 64, 68.
Bioluminescence **4**, 64.
Biotechnology **2**, 76; **4**, 58; **6**, 82; **7**, 48; **9**, 64, 68; **10**, 3, 42, 111; **11**, 76.
Black body radiation **2**, 171; **11**, 64.
Black silicon **1**, 112.
Blood banks **11**, 76.
Boeing Aerospace Co. **12**, 29.
Bonded-silica sorbents **9**, 86.
Bone fractures **4**, 17.
Boolean logic **1**, 96.
Bosons **2**, 140.
Boundary layers **2**, 144; **11**, 72.
Bragg cell **1**, 56.
Break-over diode **5**, 60.
Breathing apparatus **6**, 148.
Breeder nuclear reactors **4**, 37; **12**, 27.
Bridges **5**, 86.
Brightest galaxy **12**, 39.
Brine-hydrocarbon heat exchangers **1**, 62.
British government **5**, 43.
British industry **11**, 50.
British National Space Center **3**, 48.
Brookhaven National Laboratory **2**, 105; **10**, 62, 71; **11**, 47, 66.
Brown, Michael S. **12**, 33.
Brush Wellman Inc. **10**, 96.
Budget deficit **5**, 11; **6**, 11; **8**, 11, 43; **10**, 41; **11**, 166.
Buffer exchange **6**, 84.
Bureau of Mines **10**, 88.
"Bureaucratic existence" **1**, 46.
Buried wastes **4**, 37.
Burn-in boards **10**, 114.
Burning sequence **4**, 48.
Burnup levels **4**, 37.
Burst repetition **11**, 70.
Bus architectures **4**, 108.
Business column **3**, 50.
Business plan **2**, 47.
Business press **12**, 9.
Business problems **8**, 49.
Business strategy **2**, 47, 190.
Button board interconnect **10**, 83.
Buyer profile **12**, 40.
Buying power **3**, 67.

—C—

Cable-leakage impedance **1**, 89.
Cadmium telluride **9**, 132.
Calibration **2**, 193, 201; **4**, 114, 128, 133; **5**, 146; **9**, 105.
Calibration standards **4**, 128; **10**, 33, 99.
Calorimetric techniques **6**, 100.
Canards **3**, 43.
Cancer **5**, 51; **11**, 76.
Capacitance bridge **10**, 75.
Capacitive system **5**, 80.
Capacitors **3**, 54; **5**, 53; **6**, 138; **7**, 41.
Cape, Ronald E. **10**, 3, 111.
Capital costs **4**, 31; **7**, 9, 23; **9**, 121; **12**, 46.
Capital equipment **3**, 23; **11**, 92.
Capitalist-like market forces **2**, 119.
Capitalization **2**, 47; **5**, 29.
Car electronics **5**, 39.
Carbon dioxide lasers **1**, 3; **5**, 51; **11**, 71.
Career opportunities **8**, 54.
Cascade cell **9**, 139; **11**, 106.
Cassette conveyor **3**, 114.
Castable ceramic system **10**, 72.
Cathode dissolution **4**, 50.
Cation sodium monitor **10**, 104.
Celestial dynamics **8**, 17.
Cell efficiencies **9**, 132.
Cell-fusion methods **9**, 64.
Cell reflectance **11**, 106.
Centers of excellence **10**, 41.
Central-control system for networks **10**, 92.
Central galaxy **12**, 39.
Centralized space efforts **3**, 48.
Ceramic anode **10**, 75.
Cesium clocks **5**, 44.
Chakrabarty, A.M. **11**, 76.
Chaos theory **11**, 70.
Characterization **4**, 60; **6**, 98; **9**, 98; **11**, 40.
Charged laser array flexible mirror **6**, 76.
Charon **8**, 68.
Chemical & biological warfare **9**, 64, 66.
Chemical hazards **2**, 194.
Chemical innovation conference **5**, 44.
Chemical purification **9**, 86.
Chemical reactions **10**, 64.
Chemical sciences **12**, 31.
Chemical separation **10**, 42.
Chemical shift **9**, 128.
Chemical spills **1**, 33.

Chemiluminescence **4**, 64.
Chemistry **12**, 31.
Chemistry of electronic materials **1**, 40.
Chemistry prize **12**, 33.
Chromosome libraries **4**, 41.
Chronon **2**, 170.
Ciba-Geigy AG **10**, 96; **11**, 60.
Circuit delays **9**, 33.
Circuit densities **10**, 51.
Circuit geometry **3**, 54.
Circulatory winds **12**, 32.
Clandestine operations **6**, 49.
Clark, Barney **2**, 27.
Clear-air turbulence **2**, 78.
Climatic changes **3**, 17; **4**, 41.
Cloning procedures **11**, 72.
Close-coupled cannards **3**, 43.
Closed universe **12**, 39.
Cloud cover **11**, 35.
Cluster masses **12**, 39.
Coal-feeding systems **9**, 78.
Coal-fueled diesel locomotive **9**, 76.
Coal gasification **8**, 89; **9**, 78.
Coal reserves **9**, 78.
Coal slurry **9**, 3, 76.
Coalbed methane gas **1**, 40.
Coating application **4**, 74.
Coating failure experiments **2**, 84.
Coaxial cable **2**, 198; **4**, 97.
Codons **11**, 17.
Coercivity **5**, 121.
Cogeneration **2**, 96, 98.
Cognitive modeling **4**, 46.
Cold neutron **2**, 63.
Cold-regions research **12**, 32.
Cold-wall deposition **11**, 106.
Collective irresponsibility **2**, 120, 130.
Combined-cycle gasification **9**, 78.
Combustion methods **4**, 47; **8**, 86; **9**, 62, 76; **11**, 35.
Commercialization of space **11**, 54.
Common long-pulse source **10**, 108.
Common sense **6**, 52, 148.
Communications **3**, 77; **4**, 103; **5**, 62, 91; **6**, 76.
Communications networks **5**, 67.
Communications satellites **3**, 44.
Communications software **1**, 75; **4**, 97.
Communications technology **4**, 109; **8**, 39.
Company management **9**, 23; **12**, 58.
Company strategy **8**, 43; **11**, 29.
Compensation decisions **6**, 30; **11**, 29.
Competitive compensation levels **11**, 29.
Competitive peer review processes **8**, 58.
Competitiveness **7**, 43; **10**, 11; **12**, 31.
Complementary metal-oxide semiconductor **4**, 60; **6**, 39.
Composite **1**, 33, 54; **3**, 43, 84; **7**, 3, 62, 67; **8**, 72; **9**, 48; **11**, 60.
Composition profiles **2**, 144.
Compositional control **11**, 106.
Compositional monitoring **12**, 31.
Compound semiconductors **5**, 58.
Compressed-air energy storage **9**, 73.
Compressed-gas cylinders **11**, 139.
Compression load **7**, 67.
Compton scattering **5**, 109.
Computational needs **4**, 84.
Computed tomography **2**, 94.
Computer architecture **5**, 58.
Computer bargains **8**, 185.
Computer capacity **8**, 56.
Computer command languages **8**, 91.
Computer design **4**, 45.

Computer typesetting **5**, 46.
Conductive composites **7**, 63.
Conductive fibers **7**, 3, 60.
Conductive-solids nebulizer **4**, 114.
Conductivity detectors **9**, 95.
Confined explosion **2**, 166.
Confinement of nuclear plasma **3**, 60.
Congenital abnormalities **5**, 52.
Consolidated Edison Co. of N.Y. **10**, 87.
Consortium to fund R&D **6**, 65.
Contact resistance **9**, 123.
Contact surface probe **11**, 114.
Continental motions **10**, 19.
Continuous-flow centrifugation **6**, 83.
Continuous piezoelectric transducer **6**, 76.
Continuous-wave semiconductor **3**, 54.
Controlled circulation **12**, 9.
Controlled impact demonstration **1**, 48.
Coolant vapor **11**, 35.
Cooling rates **8**, 80.
Cooling system **11**, 35.
Cooperative agreement **9**, 58.
Cooperative research **1**, 69; **2**, 75.
Coordinating committee **2**, 122; **3**, 50; **9**, 64.
Copper alloys **12**, 29.
Copper indium diselenide **9**, 132.
Core-melt accident **6**, 47.
Corning Glass Works **10**, 75.
Coronary damage **11**, 52.
Corrosion **1**, 62; **2**, 144.
Corrosion resistance **12**, 29.
Corrosive acids **8**, 72.
Corrosive environments **10**, 42.
Cosmic background radiation **7**, 35; **11**, 64.
Cosmological models **4**, 190; **7**, 53.
Counter-rotating particles **2**, 140.
Counterion **3**, 93.
Covert acquisition **11**, 45.
Crack growth **8**, 81.
Crack reflection **7**, 68.
Cracking efficiencies **11**, 106.
Crash landing **1**, 48.
Creativity **4**, 46.
Creature comfort **10**, 23.
Critical load **3**, 88.
Critical materials **3**, 56.
Critical-path method **11**, 86.
Cross-contamination **2**, 187.
Cross-correlation frequency **4**, 124.
Cross-link density **3**, 84.
CRT controller **10**, 76.
CRT monitor **8**, 91.
Crustal plates **10**, 19.
Cryogen waste **6**, 127.
Cryogenic engineering **3**, 47; **6**, 43; **5**, 78.
Cryogenic nitrogen car **5**, 78.
Cryogenic refrigerators **11**, 62.
Cryogenic spectrometers **10**, 33.
Cryolect Scientific Corp. **10**, 71.
Cryopumps **3**, 114; **7**, 73.
Crystal-growth techniques **7**, 54.
Crystal lattice defects **5**, 109, 111.
Cure conditions **3**, 84.
Current sensitivity **1**, 88.
Custom lab **4**, 102.
Customer needs **5**, 23.
Customer reports **12**, 46.
Cylindrical mirror assembly **12**, 27.

Dual-axis cross roller slides for precise, repeatable linear motion

Type RQ slide is for use on microscopes and other scientific and medical devices where precise, repeatable linear motion is essential. Each axis has a metric micrometer with pull back spring. Large opening in both slides permits use of glass plate to support specimens and provides for unrestricted illumination. For full line Cleveland® catalog write or call M&M Precision Systems, 300 Progress Rd., West Carrollton, OH 45449, 513/859-8273.

Vacuum Technology Training

This intensive 3-day lecture course is designed to provide your technical people and technicians with a sound comprehension of vacuum technology and the practical knowledge they need to keep vacuum equipment on line.

Conducted by Varian training personnel, the course covers the operation and maintenance of vacuum components and systems, including leak detection.

Course schedule through March 1986.

CITY	DATES
Denver, CO	Dec. 3-5
Santa Clara, CA	Dec. 10-12
Salt Lake City, UT	Jan. 21-23
Chicago, IL	Jan. 28-30
San Diego, CA	Feb. 11-13
Sunnyvale, CA	Mar. 11-13
Essex Jct., VT	Mar. 18-20

We also offer regularly scheduled classes at our Palo Alto, CA and Woburn, MA training sites.

Enrollment is limited to 50. For additional information or to register call the Varian Training Registrar at (415) 424-5539, or our National Sales Center, **800-8-V-A-R-I-A-N.**

CALL FOR ENTRIES

I•R 100

Twenty-fourth annual *I•R 100* Awards Program sponsored by *Research & Development* magazine

ONE HUNDRED innovative technological products, materials, processes, and/or software that were brought to market during 1985 will be honored in this unique competition, which annually salutes the significant advances of applied science. Winners are selected on the basis of their importance, uniqueness, and usefulness from a technical standpoint by the distinguished scientists, engineers, and research administrators on our Editorial Advisory Board along with the editors of *Research & Development* magazine.

One or more of your company's new products could be winners of the coveted *I•R 100 Award*. The 1986 awards will be presented at the traditional *I•R 100* Awards Reception and Banquet on September 25 at the Chicago Museum of Science & Industry. Award-winning products will be exhibited at the Museum for a month.

To be eligible for this international competition, products must have been first marketed or available for order between January 1 and December 31, 1985. All entries must be received by March 3, 1986. For complete information, use the coupon below, circle No. 600 on the Reader Service Card in the back of this copy, or phone 312/381-1840, ext. 418.

A GLASS TOP
...WITH THE STRENGTH OF STEEL
The many outstanding benefits of glass... corrosion resistance, fast heat up, ease of cleanability are reinforced with stainless steel. The Nuova II family of hot plates, stirrers and stirring hot plates offer you glass plus:
▪ A 7" X 7" top that safely heats 2 liter vessels.
▪ Excellent speed control - consistent, dependable 60 RPM or vigorous 1000 RPM - no stalling at low speed.
▪ Strong magnetic coupling preventing Stir bar spinout at any speed.
MADE TO LAST!
Or choose from 24 other models of Thermolyne hot plates, stirrers or stirring hot plates meeting both general and unique laboratory needs.

Viscosity Recording

The Brookfield Digital Viscometer and recorder is a comprehensive system which provides the researcher with a permanent record of viscosity and/or temperature as a function of time.

Measuring options available:

- Standard Brookfield disc & cylindrical spindles.
- Coaxial cylinder spindle and chamber – a defined system using small samples.
- Cone/Plate for absolute shear rates using micro (1 ml) sample volumes.
- Thermosel system for measurement at elevated (500°F) temperatures.
- Helipath stand with T-Bar spindles for time dependent tests.

CIRCLE **176** ON INQUIRY CARD

ADALAB™ & CHROMATOCHART™

Automate GCs, HPLCs For Less Than $1,645*

DATA ACQUISITION from 1 to 4 GC or HPLC detectors with time based and logic controlled events. Detects or switches 8 input and 8 output signals any time during a run. Run duration, sampling time and binary gradient duration are variable; each can be started or stopped independently.

CHART RECORDER plots real-time continuous chart on the screen (optionally on a printer).

GRADIENT PROGRAMMER controls binary gradients for the most popular HPLC pumps. Variable gradient profiles with 200 linear segments are generated.

PEAK INTEGRATOR does post-run peak integration and plotting with baseline marks clearly depicted. Auto peak detection can be manually overruled and results recalculated. Summary reports including internal and external standards are also generated.

EASY TO USE: Menu-style operation is easy to learn. Developed methods can be stored on disk for repeated use.

***APPLE*][e Add-On Packages cost only $1645 for HPLC (with CHROMADAPT) or $1295 for GC (ADALAB and CHROMATOCHART only); IBM* PC Add-On Packages begin at $1740 for GC and $2150 for HPLC.**

$3325 complete system price includes 64K Apple][e, disk drive with controller card and 12" monitor; dot matrix printer and interface; IMI CHROMATOCHART software, plus IMI's ADALAB and CHROMADAPT interface hardware; IBM systems begin at $4995.

IMI is an Apple Value Adde , Reseller and an IBM Value Added Dealer.

LINKING THE BEST OF TWO WORLDS...

QUADSTAR™
SOFTWARE

Balzers' new QUADSTAR Software offers you menu-driven color graphics, data analysis, and mass storage for the QMG 064. By using QUADSTAR to link this powerful quadrupole partial pressure analyzer with the popular and versatile IBM PC®, you have one of the most cost-effective data analysis tools for mass spectrometry available today.

CIRCLE 178 ON INQUIRY CARD

The world's quietest, hardest working air pumps are now "MICROS"

The newest Médo "free piston" linear-motor-driven vacuum pump/air compressors are 3-35/64" long, 2-9/32" wide, 3-9/64" high and weigh about 1-1/2 lbs.

With only one moving part — a free piston — they're quieter (35 dBA/m or less), and use less power (14 watts), than anything else that pumps as much air. Médo "Micros" are the most reliable oil-less air pumps. Cannot spark. Overloads can't cause burning.

They're the only pumps that let you control air flow & pressure by controlling the voltage & thus precisely control equipment through sensors. Ideal for air-actuated tools in small robotic systems.

For creating air bearings for magnetic tapes & record player turntables. For vacuum pickups, printing equipment, medical instruments, aspirators, beauty aids. Three compressors (0.177 CFM, 0.088 CFM, 0.036 CFM at ea. rated pressure) and two vacuum pumps (−9.84"hg & −15.74"hg) are all the same size and weight. Customization available.
